

Sports Club Management System - Complete Team Architecture

Project Overview

This document contains the complete end-to-end architecture for building the Sports Club Management System with proper team collaboration structure.

System Modules

Authentication, Athlete Registration, File Upload, Admin Dashboard, Database Management, Export System.

Team Collaboration Structure

Frontend developers handle UI and validation. Backend developers manage APIs and authentication. Database engineers design tables and relationships. QA testers handle testing.

Folder Structure

admin/, api/, assets/, config/, uploads/, includes/, database/

Development Workflow

UI Design → Frontend Development → Backend APIs → Database Integration → Testing → Deployment

Security Architecture

Prepared statements, password hashing, session authentication, input sanitization, secure uploads.

Deployment

GitHub version control, XAMPP/Apache server, MySQL configuration, production deployment.

Testing

Form validation testing, upload testing, API testing, responsive testing, database testing.

Layer	Technology
Frontend	HTML, CSS, JavaScript, Bootstrap
Backend	PHP
Database	MySQL
Server	Apache / XAMPP
Version Control	Git + GitHub

Final Goal: Build a scalable, secure, team-collaborative sports management platform.
